Only one pond required attention within 48 hours this month: Pond #9 for surface algae. All other ponds need regular routine maintenance or treatment within 7 days for the below targets. The majority of these ponds requiring attention are for algae, in the many forms it can take.

Treatments performed on May 3rd for all lily species is evident on some of the ponds targeted. Since that initial treatment, foliar applications have been made on plants near the shoreline. Additional attention will be paid to some of these sites, as the inspection shows some lilies were less affected.

Stocking of Triploid Grass Carp for the control of submersed and floating vegetation on all ponds has been scheduled for June 17th at 10am.

While on site for the inspection, the maintenance manager informed me he had several calls concerning blockages near the outfalls (outflows) on Pond #50 and 51. Both were surveyed during the regular inspection and were not found to be obstructed or clogged in any way. All outfall structures are inspected each treatment to ensure carp barriers are not obstructing flow.

Wildlife observed during this inspection include Moorhens, alligators, Great Blue Herons, Great Egret, Snowy Egret, Anhinga, Black-bellied Whistling Ducks, Little Blue Herons, fish, White Ibis, Glossy Ibis, turtle, Mallard Ducks, and Sandhill Cranes.
